Producer Prices and Price Indexes is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights and changes in the sample. A subscription may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Subscription price:
$20 a year domestic (includes supplement)
$5.00 additional foreign

Single copy $3.25
Supplement $3.50

The Secretary of Labor has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through March 1982. Second-class postage paid at Laurel, Md. Price Movements
January 1982

The Producer Price Index for Finished Goods moved up 0.4 percent from December to January on a seasonally adjusted basis. The January rise followed increases of 0.3 and 0.5 percent in December and November. The intermediate goods index also rose 0.4 percent, slightly more than in either of the 2 preceding months. Crude material prices turned up with a 1.7 percent advance, following 5 consecutive monthly declines; sharply higher prices for foodstuffs were largely responsible for this upturn (table A).

Among finished goods, consumer food prices climbed sharply after showing no change in December and small decreases in each of the 3 months before that. The index for consumer goods other than foods and energy also moved up following no change in December. Capital equipment prices increased but less than in most recent months. The finished energy goods index turned down after climbing rapidly at the end of 1981.

Before seasonal adjustment, the Producer Price Index for Finished Goods moved up 0.8 percent to 277.4 (1967 = 100). Over the year, the Finished Goods Price Index rose 6.3 percent. From January 1981 to January 1982, prices for finished consumer foods increased 2.2 percent, the index for finished energy goods advanced 11.2 percent, prices for finished consumer goods other than foods and energy rose 6.2 percent, and capital equipment prices were up 8.4 percent. The intermediate goods index was 5.1 percent higher than the year before, but crude material prices were down 3.0 percent.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods advanced 0.5 percent on a seasonally adjusted basis in January, following a 0.2 percent increase in December. Finished consumer foods rose 1.1 percent after showing no change in the previous

[1] Figures shown above and elsewhere in this report may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 1981. In addition, data for September 1981 have been revised to reflect the availability of late reports and corrections by respondents.

month. The January advance was the largest monthly increase since the drought in the summer of 1980. Prices turned up sharply for pork and eggs after declining markedly in December. Price increases accelerated for refined sugar, dairy products, roasted coffee, shortening, and fish. Prices for processed poultry and milled rice fell, but much less than a month earlier. On the other hand, fresh fruit prices turned down after rising in December, and prices for fresh vegetables rose considerably less than in the previous month.

The finished energy goods index turned down with a 0.9 percent drop, following increases of over 1 percent in both November and December. Prices turned down for gasoline and natural gas, and prices for home heating oil registered a small increase for the third consecutive month.

The index for finished consumer goods other than foods and energy increased 0.5 percent, following no change in December. Within this category, nondurables rose 1.0 percent, as price increases accelerated for periodicals, newspapers, textile housefurnishings, tires and tubes, and prescription drugs. Prices turned up after declining in December for alcoholic beverages and cosmetics. On the other hand, the consumer durables index edged down 0.1 percent. Passenger car prices turned down after rising in December, and prices for household flatware moved down after no change a month earlier.

Capital equipment. The Producer Price Index for capital equipment rose 0.4 percent, after increasing 0.6 percent in December. Prices turned down after rising a month earlier for some motor vehicles, generators, textile machinery, and metal forming machine tools. Price increases decelerated for agricultural machinery. However, price increases accelerated for construction machinery, commercial furniture, oilfield and gasfield machinery, and woodworking machinery.

Intermediate materials

The Producer Price Index for Intermediate Materials, Supplies, and Components moved up 0.4 percent from December to January on a seasonally adjusted basis. This continuation of the recent pattern of moderate increases occurred in spite of sizable advances for energy and food prices.

The index for intermediate materials other than foods and energy edged up 0.1 percent, even less than in other recent months. The durable manufacturing materials index continued to recede, moving down 0.6 percent. Prices were lower for precious metals, zinc, nickle, copper, jewelers' materials, semifinished steel mill products, and flat glass. However, tin prices climbed rapidly for the sixth time in the last 7 months.

The nondurable manufacturing materials index declined 0.3 percent, following small increases in both previous months. Substantial price decreases were recorded for processed yarns, plastic resins, woodpulp, and leather. Small declines occurred for industrial chemicals and synthetic rubber. In contrast, prices advanced for gray and finished fabrics.

---

[1] Figures shown above and elsewhere in this report may differ from those previously reported. See footnote [1] on table A.

The index for construction materials registered no change in January. Prices fell for concrete products, asphalt roofing, fabricated structural metal products, and plastic construction products. These were offset by higher prices for softwood lumber, millwork, building paper and board, prepared paint, refractories, and heating equipment.

The manufacturing components index advanced 0.7 percent, as prices moved up for motor vehicle parts, metal stampings, and electronic components. However, prices decreased for machine ship products and electric motors. Among other categories of intermediate goods, prices surged for steel cans but dropped for photographic supplies.

The intermediate energy index rose 1.3 percent, more than in any other month since April. The impact of large increases for electric power and residual fuel oil was weakened by decreases for gasoline and liquefied petroleum gas.

The index for intermediate foods and feeds turned up with 2.2 percent advance, following several months of declines. Sharp increases occurred for flour and refined sugar used in food manufacturing, while prices for corn syrup fell.

Crude materials

The Producer Price Index for Crude Materials for Further Processing moved up 1.7 percent on a seasonally adjusted basis, after falling 1.4 percent in December. The upturn was primarily due to the index for foodstuffs and feedstuffs, which increased 4.4 percent after declining 2.8 percent in the previous month. After moving down for several months, prices for cattle, hogs, corn, and oilseeds rebounded with substantial increases in January. Live poultry, wheat, fluid milk, and hay also rose after falling for 2 months, and raw sugar and cocoa bean prices continued to move up rapidly. On the other hand, green coffee prices decreased after rising sharply in late 1981.

The index for crude nonfood materials other than energy moved down 3.4 percent, somewhat more than in December and about the same as November's decrease. Prices for copper base scrap and wastepaper continued to drop sharply, prices for aluminum base scrap and crude natural rubber fell after rising in December, and the newly-introduced index for logs and timber decreased 1.0 percent. In contrast, prices for iron and steel scrap and raw cotton, which had been declining for several months, climbed sharply. Cattle hide prices also rose substantially after decreasing in December.

The crude energy materials index edged down 0.1 percent, after moving up 1.3 and 0.5 percent in December and November. Natural gas prices, which had advanced substantially in the 2 previous months, fell 1.3 percent. Prices for crude petroleum were unchanged. In contrast, prices for coal rose 2.0 percent, far more than in any other month since July.

Addition of Data from the Producer Price Index Revision

Indexes for 16 more industries are now being calculated from the comprehensive program to revise the Producer Price Index. This expansion marks the introduction of indexes for boat building as well as for logging. Output price indexes are available for these industries and their major products beginning this month. The PPI revision program now covers 114 industries, which account for 31.5 percent of all mining and manufacturing production.

The industries being published for the first time in this phase of the PPI revision are the following:

Standard Industrial Classification (SIC) code	*Industry*
1211	Bituminous coal and lignite
2018	Poultry dressing plants
2079	Shortening, table oils, margarine, and other edible fats
2327	Men's, youths', and boys' separate trousers
2328	Men's, youths', and boys' work clothing
2411	Logging camps and logging contractors
3041	Rubber and plastics hose and belting
3296	Mineral wool
3354	Aluminum extruded products
3448	Prefabricated metal buildings and components
3547	Rolling mill machinery and equipment
3559	Special industry machinery, n.e.c.
3632	Household refrigerators and home and farm freezers
3643	Current-carrying wiring devices
3644	Noncurrent-carrying wiring devices
3732	Boat building and repairing

A total of 143 new items have been added this month to the list of commodities included in the Producer Price Index. Price movements for these items are based on the corresponding product indexes introduced from the PPI revision. The number of commodity indexes whose movements are based on data from the PPI revision now comes to more than 1,500 out of a total of approximately 6,000 indexes expected when the revision program is completed. A comprehensive summary of the various changes associated with the January 1982 addition of data from the PPI revision will appear in the February issue of this report.

Indexes from the PPI revision appear in table 4 of this report. Traditional indexes which correspond to the new indexes published in the revision program are now based on the movements of the corresponding revision indexes. As new industries are published, their product indexes also will be used in the traditional commodity and ISPI structures. Introduction of the next set of indexes for industries based on the PPI revision program is planned for July 1982. An entirely new industry-based stage-of-processing structure will eventually become the primary vehicle for releasing and analyzing price changes at the primary market level.

For a summary of the major difference between the new indexes and traditional commodity price indexes and ISPI's, see the technical note on "Data from the Producer Price Index Revision" in the back of this issue.

Recalculation of Seasonal Adjustment Factors

Effective with data for January 1982, seasonal adjustment factors have been recalculated to reflect 1981 price movement patterns for stage-of-processing (SOP) groupings, commodity groups, and durability groupings. This routine annual recalculation may affect seasonally adjusted indexes and percent changes from January 1977 to the present. Revised seasonally adjusted data for this period, as well as seasonal factors to be used through December 1982, are available on request from BLS. Table C below shows 1981 monthly seasonally adjusted percent changes for the three major SOP categories calculated with the old seasonal factors, compared with the percent changes for recalculated indexes which incorporate the new seasonal factors.

Changes in Table Formats and Numbering

Effective with this issue, the following significant changes have been made in the tables appearing in *Producer Prices and Price Indexes:*

1. The former table 3, "Producer price indexes and percent changes for selected stage-of-processing groupings, seasonally adjusted," has been replaced by a new table 3, "Producer price indexes for selected stage-of-processing groupings, seasonally adjusted." This will show historical seasonally adjusted indexes for the same stage-of-processing groupings shown on charts 1, 2, and 3, for 7 years through the most recent month.

2. The former table 8, "Producer price indexes for bituminous coal by regions," has been deleted. Regional price indexes for bituminous coal are now being generated under the Producer Price Index Revision program and will appear each month in table 4.

3. The former table 10, "Producer price indexes: Changes in commodity specifications" has been deleted. In those months when specification changes are made, an appropriate table will appear after all the regular tables.

4. The former table 12, "Percent changes in producer price indexes for the output of selected SIC industries," has been deleted.

5. The following tables have been renumbered.

4-digit SIC industries	11	9
5-digit Census product classes	13	10
Railroad freight	14	11

[1] Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 89 percent of total finished goods, about 88 percent of total intermediate materials, and about 96 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

[2] All data are subject to revision 4 months after original publication.

[3] Not seasonally adjusted.

[4] Not available.

NOTE: Seasonally adjusted data shown may differ from those previously reported. See footnote 1 on table A.

[1] These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping. The weights are those used for the comprehensive All Commodities index.

[2] Data for September 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities, less farm products: 02 through 15

All foods: 011,017, and 02 less 0261, 0262, and 029

Processed foods: 02 less 0261, 0262, and 029

Industrial commodities, less fuels and related products and power: 03, 04, and 06 through 15

Selected textile mill products: 0327, 03370105, 03370107, 03370109, 03370111, 034, 03810155, 03810172, 03810173, 03810239, 03810272, 03810274, 03810362, 03810364, 038201, 038202, 03830322, 03830342 and 1231

Hosiery: 03810172, 03810173, 03810272, 03810364

Underwear and nightwear: 03810174, 03810175, 03810176, 03810177, 03810178, 03810274, 03810275, 03810278, and 03810362

Chemicals and allied products, including synthetic rubber and synthetic fibers: 031, 06 less 064, and 071102

Pharmaceutical preparations: 0634, 0635 and 0636

Lumber and wood products, excluding millwork and other wood products: 081 and 083

Special metals and metal products: 10, 111, and 141

Fabricated metal products: 103, 104, 105, 106, 107, and 108

Copper and copper products: 10220123, 10220124, 10220125, 102301, 10240301, 10240302, 10240304, 10240305, 102502, and 102601

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 111, 112, 113, 114, 116, 118, and 119

Agricultural machinery, including tractors: 1111, 1112 less 111151 and 111251

Metalworking machinery: 1132, 113304, 1137, and 1138

Numerically controlled machine tools: 11371111, 11371112, 11371411 and 113716

Total tractors: 1111 and 1128 less 111151, 112802 and 112803

Industrial valves: 11490101 through 11490106, 11490116 through 11490119, 11490121 through 11490127

Industrial fittings: 11490111 through 11490115

Agricultural machinery and equipment, less parts (old commodity code 111): 111 less 111151 and 111251

Farm and garden tractors, less parts (old commodity code 1111): 1111 less 111151

Agricultural machinery excluding tractors, less parts (old commodity code 1112): 1112 less 111251

Construction materials: 0621, 0721, 0811, 08120171, 082, 083, 092, 10130239, 10130248, 10130255, 10130263, 10130269, 10130271,10130289, 10130291, 101502, 10250101, 10250103, 10250104, 10250105, 10250117, 10250118, 10250119, 10250121, 10250131, 10250254, 10251993, 10260106, 10260107, 10260109, 10260111, 10260267, 10260271, 104101, 105, 106, 1071, 10730101, 10730106, 10730111, 10730112, 10730113, 10730114, 10730115, 10730155, 10730157, 107402, 107403, 107404, 10740501, 10740731, 10740781, 10740782, 10740787, 10740791, 10810146, 10830201, 10830203, 10830205, 10830207, 10830209, 10830211, 10830301, 10830321, 10830323,10830325, 10830329, 10830351, 10830361, 10890526, 10890533, 10890551, 1142,1147, 11490102, 11490106, 11490112, 11490115, 11710101, 11710102, 11710103,11710104, 11710265, 11710271, 11710273, 1232, 131105, 132, 133,134, 136, 137,1391, 1392, 1393

[1] Standard Transportation Commodity Code.
[2] The price index for total railroad freight also includes STCC groups not shown separately.
[3] The figure shown for each item is its percent of total railroad freight.
[4] Dec. 1978 = 100.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

Technical Notes

Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

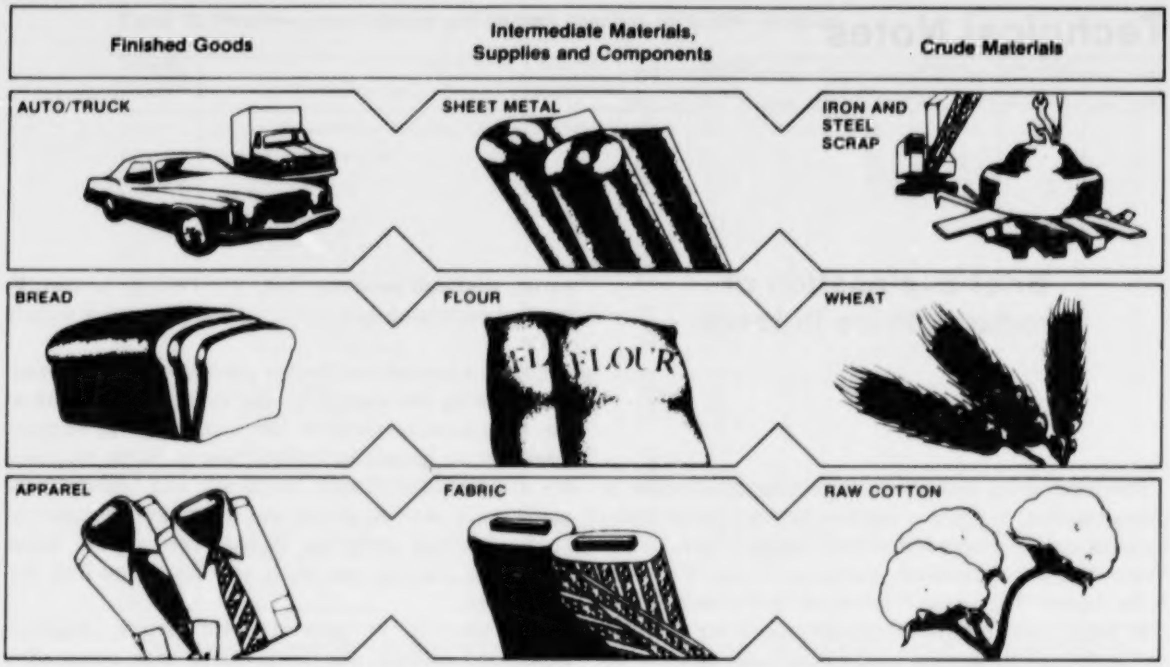
Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price change by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices



generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating producer price indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from $100 in 1967 to $225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Index Point Change	
Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0
Index Percent Change	
Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics published seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude

every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4. "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) will continue to be published. In 1983, however, an entirely new structure will replace the traditional commodity structure as the primary vehicle for releasing and analyzing price changes at the primary market level.

Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Corresponding indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 11,12, and 13. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables 6, 11, or 13 on their original base period of 1967 = 100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 11,12, or 13 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based*. The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be

constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights*. Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979. Price Movements
February 1982

The Producer Price Index for Finished Goods edged down 0.1 percent from January to February on a seasonally adjusted basis. This followed increases of about 0.4 percent in each of the preceding 3 months and was the first decline since February 1976. Prices for intermediate goods decreased 0.3 percent, after rising 0.4 percent in January and 0.2 percent in December. Crude material prices dropped 0.6 percent, following a 1.7 percent climb in January and declines in each of the last 5 months of 1981. This marked the first time since February 1975 that the three major stage-of-processing indexes all decreased in the same month on a seasonally adjusted basis (table A).

Price moderation was broad-based among finished goods in February. Capital equipment prices fell 0.4 percent, the first decline since October 1972. Prices for finished energy goods decreased much more than in the previous month. Prices for consumer foods and consumer goods other than foods and energy rose considerably less than in January.

Before seasonal adjustment, the Producer Price Index for Finished Goods was unchanged at 277.4 (1967 = 100). Over the year, the Finished Goods Price Index moved up 5.4 percent. From February 1981 to February 1982, the index for finished consumer foods rose 2.7 percent, prices for finished energy goods were up 5.2 percent, the index for finished consumer goods other than foods and energy increased 6.0 percent, and capital equipment prices advanced 7.1 percent. The index for intermediate goods rose 4.4 percent over the year, while crude material prices were 4.5 percent lower than a year ago.

Finished goods

Capital equipment. The Producer Price Index for capital equipment moved down 0.4 percent, following a rise of the same size in January. Much of the February reversal was due to cars and trucks, which fell sharply after virtually no change in the previous month. Prices declined somewhat after increasing substantially in January for photographic equipment, plastics machinery, printing trades machinery, rubber working machinery, fans and blowers, and woodworking machinery. Price increases for construction machinery and for oilfield and gasfield machinery slowed considerably. On the other hand, prices for metal forming machine tools and textile machinery turned up after declining a month earlier, and prices rose faster than in January for commercial furniture, office and store

machines, agricultural machinery, and mining machinery.

Finished consumer goods. The Producer Price Index for finished consumer goods edged down 0.1 percent on a seasonally adjusted basis, following a 0.5 percent increase in January. The finished energy goods index fell 1.8 percent, twice as much as the January decline and the largest monthly decrease since January 1976. Gasoline prices fell more sharply than in January, and home heating oil prices turned down after edging up a month earlier. On the other hand, prices for natural gas climbed 2.0 percent, after falling 1.3 percent in the previous month.

The index for finished consumer foods rose 0.5 percent, following a 1.1 percent increase in January. Prices turned down after rising a month earlier for fish, refined sugar, shortening and cooking oils, and fresh and dried vegetables. Prices for fresh fruits and milled rice fell more than in January. Pork and roasted coffee prices rose much less than in January. On the other hand, price increases accelerated for beef and veal and dairy products. Egg prices rose 8.0 percent, about as much as in January.

The index for finished consumer goods other than foods and energy edged up 0.2 percent, following a 0.5 percent advance in January. Passenger cars declined 1.3 percent, following a 0.4 percent drop in January, and prices for light motor trucks fell 7.9 percent after 2 months of virtually no change. Prices for alcoholic beverages turned down after increasing in January. Prices fell faster than a month earlier for leather footwear and gold jewelry. In addition, price increases slowed for newspapers, periodicals, and textile housefurnishings. On the other hand, prices for cosmetics, prescription drugs, tires and tubes, electric lamps and bulbs, and boats advanced more than a month earlier, and the index for tobacco products turned up, following a January drop.

Intermediate materials

The Producer Price Index for Intermediate Materials, Supplies, and Components declined 0.3 percent in February, the first drop in nearly 7 years. This was largely due to a 1.6 percent decrease in the index for intermediate energy goods, reflecting the passthrough of sharp reductions in world crude oil prices. Prices for gasoline, residual fuel, liquefied petroleum gas, and kerosene fell substantially. Moderate downturns were registered for electric power, commercial jet fuel, and diesel fuel.

The index for intermediate materials other than foods and energy was unchanged, following several months of very small increases. The movements of the major component indexes were virtually the same as a month before. The durable manufacturing materials index fell 0.7 percent. Cobalt prices were more than one-third lower than their last reported level in September 1981. Prices for copper, gold, aluminum, lead, ferrosilicon, jewelers' materials and findings, and hardwood lumber also declined. However, higher prices were recorded for silver, tin, and zinc.

The index for nondurable manufacturing materials moved down 0.3 percent, as prices continued to recede for organic industrial chemicals and nitrogenates. Prices for gray and finished fabrics rose much less than in January. On the other hand, prices turned up after sharp declines in the previous month for plastic resins, leather, and inedible fats and oils. Prices for inorganic industrial chemicals continued to advance.

The construction materials index edged down 0.1 percent. Prices for softwood lumber, millwork, plywood, and building paper and board were lower. In contrast, increases occurred for refractories, gypsum products, and environmental controls.

Within the manufacturing components category, prices for foundry products, machine shop products, and various types of industrial equipment advanced. In other categories, prices rose for glass containers, metal containers, mixed fertilizers, and machine parts.

The intermediate foods and feeds index moved up 0.3 percent, much less than in January. While crude vegetable oils and flour turned down, prices for feeds, corn syrup, lard, and refined vegetable oils increased considerably.

Crude materials

The Producer Price Index for Crude Materials for Further Processing fell 0.6 percent on a seasonally adjusted basis, after rising 1.7 percent in January. The downturn was due to a marked deceleration in increases for foodstuffs, combined with lower prices for energy and other nonfood materials.

The index for crude foodstuffs and feedstuffs rose 0.7 percent, substantially less than the 4.4 percent climb in January. Prices for cattle, hogs, live poultry, and hay recorded smaller increases than in the preceding month. Prices for wheat, corn, raw cane sugar, and cocoa beans fell after large advances in January. Green coffee prices moved down much more than in the previous month. Oilseeds prices, however, rose more than in January.

The index for crude nonfood materials other than energy fell 5.1 percent, even more than in other recent months. Prices for iron and steel scrap, raw cotton, and potash decreased after advancing in the previous month. Indexes for aluminum base scrap, copper base scrap, wastepaper, and crude natural rubber continued to move down. Cattle hide prices rose much less than in January. In contrast, prices for logs and timber and for sand and gravel turned up after falling in the preceding month.

The crude energy materials index moved down 0.5 percent, slightly more than in January. Prices for crude petroleum decreased 2.2 percent after showing no change in January. Coal prices moved up much less than in January. In contrast, natural gas prices turned up after decreasing in the previous month.

[1] Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 89 percent of total finished goods, about 88 percent of total intermediate materials, and about 96 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

[2] All data are subject to revision 4 months after original publication.

[3] Not seasonally adjusted.

[1] Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

[2] Data for October 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

[3] Not available.

[4] Prices for all items in this grouping are lagged 1 month.

[5] Regional refined petroleum product prices and price indexes are presented in table 7.

[6] Prices for some items in this grouping are lagged 1 month.

n.e.c. = Not elsewhere classified.

Note: Titles of some commodities are not shown in this table because they fail to meet our publication criteria.

[1] Data for October 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices are lagged 1 month. Data are not seasonally adjusted.

[2] Caution should be used in interpreting month-to-month changes because of low response rates, which ranged from 30 to 80 percent for these indexes.

[1] Standard Transportation Commodity Code.

[2] The price index for total railroad freight also includes STCC groups not shown separately.

[3] The figure shown for each item is its percent of total railroad freight.

[4] Dec. 1978 = 100.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

Technical Notes

Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

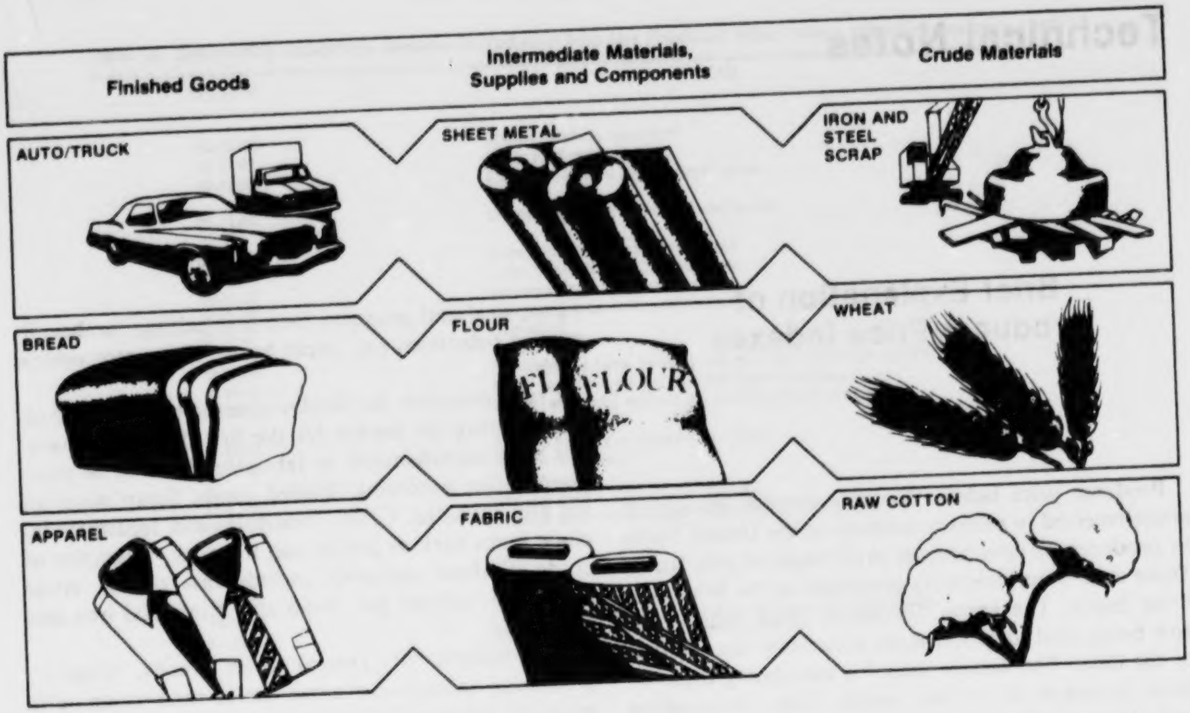
Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price change by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices



generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating producer price indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from $100 in 1967 to $225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Index Point Change	
Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0
Index Percent Change	
Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics published seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude

every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4, "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) will continue to be published. In 1983, however, an entirely new structure will replace the traditional commodity structure as the primary vehicle for releasing and analyzing price changes at the primary market level.

Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Corresponding indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 11,12, and 13. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables 6, 11, or 13 on their original base period of 1967 = 100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 11,12, or 13 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based.* The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be

constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights.* Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

For further information on the underlying concepts and methodology of the PPI revision, see two *Monthly Labor Review* articles by John F. Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979. Price Movements
March 1982

The Producer Price Index for Finished Goods edged down 0.1 percent from February to March on a seasonally adjusted basis. This followed an identical decline in February and a 0.4 percent rise in January. Prices for intermediate goods moved down 0.3 percent for the second consecutive month. Crude material prices dropped 0.9 percent, somewhat more than the February decrease of 0.6 percent (table A).

Among finished goods, energy prices declined even more than in either January or February, and food prices edged down following increases in each of those months. The index for finished consumer goods other than foods and energy rose 0.2 percent for the second consecutive month. Capital equipment prices, however, turned up after decreasing in February.

During the first quarter of 1982, the Finished Goods Price Index increased at a seasonally adjusted annual rate of 0.6 percent, the slowest quarterly advance for this index since it edged down during the opening 3 months of 1976. The finished energy goods index fell at a rate of 18.5 percent from December 1981 to March 1982, a drop approached only by a 14.2 percent rate of decline in the first quarter of 1976. Price increases for capital equipment and for finished consumer goods other than foods and energy slowed to rates of 2.1 and 3.6 percent, considerably less than in other recent quarters. On the other hand, the index for finished consumer foods moved up at a rate of 5.8 percent. Prices for intermediate goods declined at a 1.2 percent rate in the first 3 months of 1982, the first decrease since the second quarter of 1975. Because of higher foodstuff prices, the crude materials index rose at a rate of 1.0 percent, following sharp declines in each of the final 2 quarters of 1981.

Before seasonal adjustment, the Producer Price Index for Finished Goods decreased 0.2 percent in March to 276.9 (1967 = 100). Over the year, the Finished Goods Price Index was up 4.1 percent. From March 1981 to March 1982, prices for finished consumer foods rose 1.8 percent, finished energy prices fell 2.8 percent, the index for finished consumer goods other than foods and energy advanced 6.0 percent, and capital equipment prices climbed 6.8 percent. The Producer Price Index for intermediate goods was 2.9 percent higher than a year earlier, while crude material prices dropped 4.3 percent.

seasonally adjusted basis, after edging down 0.1 percent in February. The finished energy goods index declined 2.3 percent, the third consecutive monthly decrease and the largest monthly decline in over 6 years. Prices for both gasoline and home heating oil fell more sharply than in the previous month. On the other hand, prices for natural gas rose 2.4 percent after increasing 2.0 percent in February.

The index for finished consumer foods edged down 0.2 percent, after rising 0.5 percent in February and 1.1 percent in January. Price indexes turned down after rising sharply a month earlier for eggs, pork, and dairy products. Prices fell more than in February for fresh fruits and vegetables and for shortening and cooking oils. Whole black pepper fell 9.1 percent after several months of little or no change. Price increases decelerated for roasted coffee, soft drinks, and processed fruits and vegetables. However, prices turned up after falling in February for fish and processed poultry. Beef and veal prices rose more rapidly than in either of the 2 preceding months. Milled rice prices fell but not as much as in February.

The index for finished consumer goods other than foods and energy rose 0.2 percent, the same as in the previous month. Price indexes turned up for both passenger cars and light motor trucks after declining a month earlier. Increases also occurred for apparel, household appliances, alcoholic beverages, pharmaceutical preparations, household flatware, rubber footwear, and cutlery. On the other hand, large declines were registered for gold jewelry, cosmetics, and tires and tubes.

Capital equipment. The Producer Price Index for capital equipment advanced 0.5 percent after moving down 0.4 percent in February. Prices turned up after falling a month earlier for motor vehicles and photographic equipment. Prices rose somewhat faster than in February for integrating and measuring instruments and for oilfield and gasfield machinery. However, food products machinery prices fell more than a month earlier, and prices for construction equipment and for pumps and compressors edged down after several months of increases. Price advances slowed somewhat for commercial furniture, office and store machinery, transformers, mining machinery, and agricultural machinery.

Intermediate materials

The Producer Price Index for Intermediate Materials, Supplies, and Components fell 0.3 percent in March, seasonally adjusted, the same as in the prior month. The index for intermediate materials other than foods and energy was unchanged for the second consecutive month; its major component categories registered changes nearly the same as those in the previous month.

The index for durable manufacturing materials dropped 0.6 percent. Tin prices plummeted 21.7 percent, after having soared nearly 30 percent from June through February. Silver and gold prices dropped 17.4 and 13.0 percent, respectively. Prices for nearly all other nonferrous metals also fell unusually sharply, and the indexes for jewelers' materials and ferrosilicon continued to recede.

The nondurable manufacturing materials index declined 0.3 percent, as prices fell sharply for plastic resins, finished fabrics, leather, and fertilizer materials. Decreases also occurred for paint materials, gray fabrics, and paperboard. Prices for inedible fats and oils, however, climbed about 2 percent for the second consecutive month.

The construction materials index edged up 0.1 percent. Large increases for plywood, switchgear and switchboards, refractories, and gypsum products were offset by downward movements for millwork, softwood lumber, and plastic construction products.

In other categories, prices for glass containers, unsupported plastic film, transportation equipment hardware, and machine tool parts rose substantially. In contrast, price reductions were recorded for mixed fertilizers, pesticides, and photographic supplies.

The index for intermediate energy goods moved down 1.1 percent, the second consecutive drop. Prices were considerably lower for gasoline, residual fuel, liquefied petroleum gas, diesel fuel, and kerosene. The electric power index rose sharply for the fourth time in the last 5 months, however.

The intermediate foods and feeds index also declined 1.1 percent. Prices for animal feeds, refined sugar used in food manufacturing, and fats and oils decreased markedly, while the flour index turned up.

Crude materials

The Producer Price Index for Crude Materials for Further Processing fell 0.9 percent on a seasonally adjusted basis, slightly more than the decline in February. Prices for nonfood materials continued to fall, and foodstuffs moved up less than in February.

The index for crude nonfood materials other than energy fell 4.1 percent; this index has decreased at least 2 percent in each of the last 5 months. Prices for ferrous and copper scrap, wastepaper, and potash continued to decline substantially. Cattle hide prices turned down after rising in each of the preceding 2 months. On the other hand, prices turned up for raw cotton and crude natural rubber following February decreases. Prices for logs and timber and for sand and gravel also rose.

The crude energy materials index moved down 1.1 percent, after falling 0.5 percent in February. Prices for crude petroleum declined considerably more than in the previous month, and coal prices turned down following an increase in the previous month. Natural gas prices, however, moved up somewhat more than in February.

The index for crude foodstuffs and feedstuffs edged up 0.2 percent, somewhat less than the 0.7 percent increase in February. Prices for cattle and hogs showed smaller increases than in the preceding month. Prices for oilseeds, which had risen in January and February, fell considerably in March. Prices for raw cane sugar and cocoa beans moved down substantially. In contrast, increases for live poultry accelerated, and wheat and corn prices turned up after falling in the preceding month.

[1] Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 89 percent of total finished goods, about 88 percent of total intermediate materials, and about 96 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

[2] All data are subject to revision 4 months after original publication.

[1] Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

[2] Data for November 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

[3] Not available.

[4] Prices for all items in this grouping are lagged 1 month.

[5] Regional refined petroleum product prices and price indexes are presented in table 7.

[6] Prices for some items in this grouping are lagged 1 month.

n.e.c. = Not elsewhere classified.

Note: Titles of some commodities are not shown in this table because they fail to meet our publication criteria.

[1] Date for November 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices are lagged 1 month. Data are not seasonally adjusted.

[2] Caution should be used in interpreting month-to-month changes because of low response rates, which ranged from 30 to 60 percent for these indexes.

[2] The price index for total railroad freight also includes STCC groups not shown separately.

[3] The figure shown for each item is its percent of total railroad freight.

[4] Dec. 1978 = 100.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

Technical Notes

Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

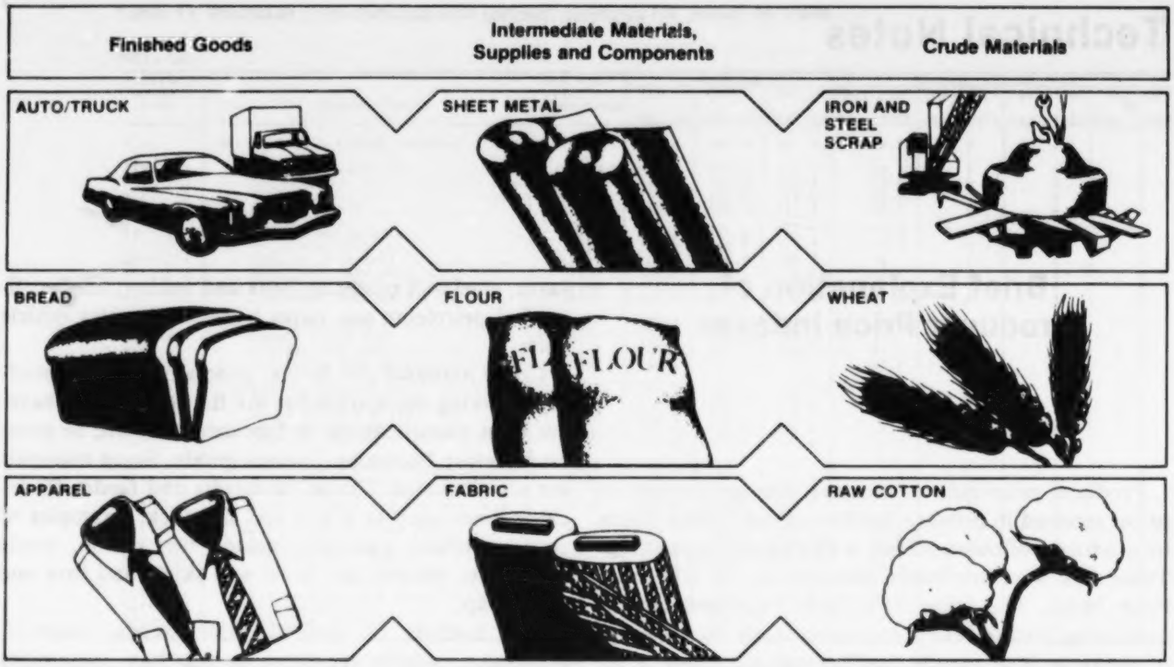
Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price change by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices



generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating producer price indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from $100 in 1967 to $225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Index Point Change	
Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0
Index Percent Change	
Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics published seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude

every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4, "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) will continue to be published. In 1983, however, an entirely new structure will replace the traditional commodity structure as the primary vehicle for releasing and analyzing price changes at the primary market level.

Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Corresponding indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 11,12, and 13. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables 6, 11, or 13 on their original base period of 1967 = 100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 11,12, or 13 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based.* The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be

constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights*. Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

For further information on the underlying concepts and methodology of the PPI revision, see two *Monthly Labor Review* articles by John F. Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979. Price Movements
April 1982

The Producer Price Index for Finished Goods edged up 0.1 percent from March to April on a seasonally adjusted basis. The index had moved down 0.1 percent in each of the 2 preceding months. The index for intermediate goods decreased 0.6 percent, following 2 monthly declines of 0.3 percent. The crude materials index, however, jumped 1.8 percent, after falling in both February and March (table A).

Among finished goods, prices for consumer foods climbed 1.6 percent, following a slight decline in the previous month. The index for finished consumer goods other than foods and energy advanced 0.6 percent. The finished energy goods index dropped 5.2 percent, an even sharper decrease than in earlier months this year. Capital equipment prices rose 0.4 percent, roughly the same as in March.

Before seasonal adjustment, the Producer Price Index for Finished Goods was unchanged at 276.9 (1967 = 100). Over the year, the Finished Goods Price Index was up 3.1 percent. In contrast, the index had climbed 10.9 percent from April 1980 to April 1981. From April 1981 to April 1982, prices for finished consumer foods rose 3.1 percent, the index for finished energy goods was down 9.0 percent, prices for finished consumer goods other than foods and energy increased 5.3 percent, and the capital equipment index advanced 6.3 percent. The Producer Price Index for intermediate goods was 1.4 percent higher than a year earlier, while crude material prices were 4.0 percent lower.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods was unchanged from March to April on a seasonally adjusted basis, after moving down slightly in each of the previous 2 months. The index for finished consumer foods advanced 1.6 percent, following a decrease of 0.2 percent in March and a rise of 0.5 percent in February. Pork prices climbed 13.5 percent after edging down in the previous month. Prices also turned up after declining in March for fresh fruits and eggs. Beef and veal rose considerably more in April (3.7 percent) than in March (1.9 percent). Fresh and dried vegetables fell but much less than in March. On the other hand, prices moved down somewhat for roasted coffee and processed fruits and vegetables, following small increases in the previous month. Prices for milled rice and dairy products fell more than in March, and prices rose less than in the previous month for processed poultry and fish.

[1] Data for December 1981 have been revised to reflect the availability of late reports and corrections by respondents. For this reason, some of the figures shown above and elsewhere in this report may differ from those previously reported.

The finished energy goods index declined 5.2 percent, the fourth consecutive monthly decrease and the largest monthly decline since the Bureau began calculating this series in 1974. April price indexes fell at a sharper rate for both gasoline and home heating oil (reflecting March prices). On the other hand, natural gas prices rose 2 percent or more for the third consecutive month.

The index for finished consumer goods other than foods and energy rose 0.6 percent, following increases of 0.2 percent in each of the previous 2 months. Price increases accelerated for newspapers, periodicals, drugs, leather footwear, and household furniture. Prices turned up after declining in March for gold jewelry, cosmetics, and electric lamps and bulbs. On the other hand, prices turned down after rising in March for passenger cars, costume jewelry, and apparel. Price increases slowed markedly for light motor trucks, household flatware, household appliances, mobile homes, and tobacco products.

Capital equipment. The Producer Price Index for capital equipment rose 0.4 percent, about as much as in March. Increases of over 1 percent were registered for several categories, including photographic equipment, chemical industry machinery, industrial process furnaces and ovens, construction machinery, and woodworking machinery. In contrast, declines occurred for food products machinery, passenger cars, and railroad equipment.

Intermediate materials

The Producer Price Index for Intermediate Materials, Supplies, and Components dropped 0.6 percent from March to April on a seasonally adjusted basis, the third consecutive decline. For the first time since April 1975, the index for intermediate materials other than foods and energy registered a decrease, falling 0.3 percent. The nondurable manufacturing materials index dropped 1.5 percent, by far the largest decline in 30 years. Prices were sharply lower for industrial chemicals, plastic resins, synthetic fibers, gray and finished fabrics, woodpulp, paperboard, inedible fats and oils, and leather.

The index for durable manufacturing materials edged down 0.2 percent, following a somewhat larger decline in March. Prices continued to fall for zinc, copper, lead, and aluminum. However, prices for gold and silver jumped 9.3 and 7.8 percent, following steep declines in March.

The construction materials index declined 0.3 percent, continuing the pattern of small changes that has prevailed since mid-1981. Price reductions were recorded for asphalt roofing and paving mixtures, plywood, millwork, and building paper and board. In contrast, prices rose for softwood lumber, copper wire and cable, and heating equipment.

In the manufacturing components category, increases occurred for ball and roller bearings, internal combustion engines, and electric motors. In other categories, prices advanced sharply for foamed plastic products, but fell for glass containers, agricultural chemicals, photographic supplies, and wooden pallets.

The index for intermediate energy goods fell 2.5 percent, more than in any other month since this index began in 1974. Substantial decreases were registered for gasoline, diesel fuel, liquefied petroleum gas, commercial jet fuel, and kerosene. Electric power prices rose but far less than in the previous month.

The intermediate foods and feeds index turned up with a 2.4 percent increase after a moderate decline in March. Most of this upturn was caused by higher prices for animal feeds, which had fallen in March. Prices for crude vegetable oils also climbed rapidly, but flour prices turned down.

Crude materials

The Producer Price Index for Crude Materials for Further Processing moved up 1.8 percent on a seasonally adjusted basis, after falling 0.9 percent in March. The index for crude foodstuffs and feedstuffs moved up sharply (3.5 percent), after rising much less in February and March. Price increases accelerated sharply for cattle, hogs, corn, and green coffee. Prices for oilseeds and raw cane sugar turned up sharply after falling in the previous month. On the other hand, prices for live poultry and wheat turned down following March increases. Prices for cocoa beans continued to move down, although not as much as in either of the previous 2 months.

The index for crude nonfood materials other than energy rose 1.9 percent; the index fell before seasonal adjustment but less than usual in April, resulting in a seasonally adjusted rise. Raw cotton prices moved up substantially for the second consecutive month. Prices for logs and timber and for crude natural rubber also continued to advance. Prices for potash turned up after decreasing in February and March. Although prices for iron and steel scrap, copper base scrap, and wastepaper continued to decline, the decreases were smaller than in earlier months this year. In contrast, prices for aluminum base scrap and cattle hides fell much more than in March.

The crude energy materials index moved down 1.1 percent, the same as in March. Crude petroleum prices declined more than in either February or March. Natural gas prices continued to move up at about the same rate as in both of the 2 previous months. Coal prices turned up after a March decrease.

[1] Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 88 percent of total finished goods, about 88 percent of total intermediate materials, and about 96 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

[2] All data are subject to revision 4 months after original publication.

[3] Not seasonally adjusted.

[1] Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

[2] Data for December 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

[3] Not available.

[4] Prices for all items in this grouping are lagged 1 month.

[5] Regional refined petroleum product prices and price indexes are presented in table 7.

[6] Prices for some items in this grouping are lagged 1 month.

n.e.c. = Not elsewhere classified.

Note: Titles of some commodities are not shown in this table because they fail to meet our publication criteria.

Chemicals and allied products, including synthetic rubber and synthetic fibers: 031, 06 less 064, and 071102

Pharmaceutical preparations: 0634, 0635, and 0636

Lumber and plywood[3]: 081 and 083

Special metals and metal products: 10, 111, and 141

Fabricated metal products: 103, 104, 105, 106, 107, and 108

Copper and copper products: 10220123, 10220124, 10220125, 102301, 10240301, 10240302, 10240304, 10240305, 102502, and 102601

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 111, 112, 113, 114, 116, 118, and 119

Agricultural machinery, including tractors: 1111 and 1112 less 111151 and 111251

Metalworking machinery: 1132, 113304, 1137, and 1138

Numerically controlled machine tools: 11371111, 11371112, 11371411, and 113716

Total tractors: 1111 and 1128 less 111151, 112802, and 112803

Industrial valves: 11490101 through 11490106, 11490116 through 11490119, and 11490121 through 11490127

Industrial fittings: 11490111 through 11490115

Agricultural machinery and equipment, less parts (old commodity code 111): 111 less 111151 and 111251

Farm and garden tractors, less parts (old commodity code 1111): 1111 less 111151

Agricultural machinery excluding tractors, less parts (old commodity code 1112): 1112 less 111251

Construction materials: 0621, 0721, 0811, 08120171, 082, 083, 092, 10130239, 10130248, 10130255, 10130263, 10130269, 10130271, 10130289, 10130291, 101502, 10250101, 10250103, 10250104, 10250105, 10250117, 10250118, 10250119, 10250121, 10250131, 10250254, 10251993, 10260106, 10260107, 10260109, 10260111, 10260267, 10260271, 104101, 105, 106, 1071, 10730101, 10730106, 10730111, 10730112, 10730113, 10730114, 10730115, 10730155, 10730157, 107402, 107403, 107404, 10740501, 10740731, 10740781, 10740782, 10740787, 10740791, 10810146, 10830201, 10830203, 10830205, 10830207, 10830209, 10830211, 10830301, 10830321, 10830323, 10830325, 10830329, 10830351, 10830361, 10890526, 10890533, 10890551, 1142, 1147, 11490102, 11490106, 11490112, 11490115, 11710101, 11710102, 11710103, 11710104, 11710265, 11710271, 11710273, 1232, 131105, 132, 133, 134, 136, 137, 1391, 1392, and 1393
